

MTH 165: Problem-Solving Seminar

Professors: Miaohua Jiang and Stephen Robinson

Our goal this semester is to encourage undergraduate students at all levels to participate in mathematical competitions. Our primary focus will be on preparing for the Virginia Tech Exam and the Putnam Exam, which are in late October and early December, respectively. While we are working on practice problems from old exams we will get plenty of experience with problem-solving strategies that are useful in all math classes. Class meetings are intended to be informal, interactive, fun and productive. Your grade depends only upon your willingness to show up and participate.
